We should already have a viewport Delete it, we don't need it at this time We will create a new one, this one might will be seen too small or too large after we set our page.

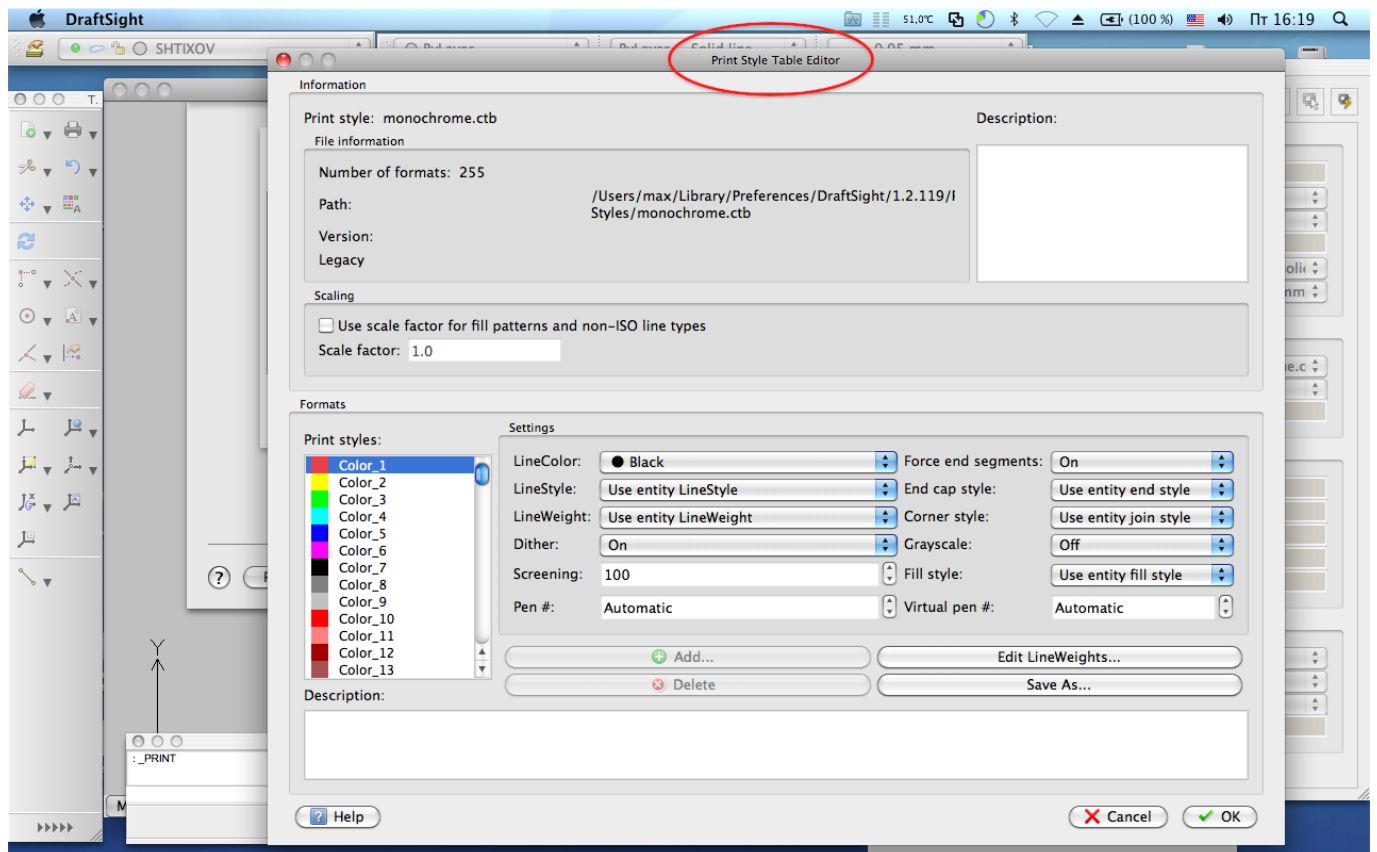

1. [plotting autocad](#)
2. [plotting autocad drawing to scale](#)
3. [lineweight not plotting autocad](#)

You have 'plot with plot styles' PLUS 'plot object lineweights on: pick one or the other, never both.. But that's a different story Let's talk about the basic first Draw the object original size, not scaled.. But there are some rules and steps you have to do when you draw and arrange your model in layouts, it's already started when you create your file!.

## plotting autocad

plotting autocad, plotting autocad to pdf, plotting autocad drawing to scale, plotting autocad blocks, lineweight not plotting autocad, hatch not plotting autocad, batch plotting autocad, image not plotting autocad, linetype not plotting autocad, xref not plotting autocad, autocad plotting takes long time, autocad plotting in color, autocad plotting blank page, autocad plotting near me, autocad plotting lines too thick, autocad plotting tutorial

Third image: LEGACY WIREFRAME means you want AutoCAD to totally ignore the plot style table you finally selected.. Open your layout2, then open page setup manager again Select your previous page setup, then click set current.

## plotting autocad drawing to scale

We will discuss about this on separate post 2 Set Your Page/LayoutNext thing you should do is setup your page.. Saw several posts in the forum saying they are confused how to do it Why the plot result is not correctly scaled.

---

## lineweight not plotting autocad

A beginner's guide to plotting (printing) in AutoCAD This tutorial also covers the basics of using viewports in Paper Space and inserting titleblocks.. I open the plot window set everything up for plotting and select save as PDF on the bottom left corner of the plot window, the window closes and no PDF is created.. Plotting is actually very easy Simple Just click plot or publish then you're done.. Saw several posts in the forum saying they are confused how to do it Why the plot result is not correctly scaled.. Use layout, because it is easier to understand and easier to manage Open your layout.. Now let's set the page setup Open your page setup manager You can open it by right clicking over the tab name, then select page setup manager.. They have to rescale it manually And this might sound weird, but some of them actually draw it by scaling it, just like drawing it manually on paper.. I believe there is an easier way, but can't find it I usually already have it setup in my template, or simply make a copy from existing layout.
