So once again, I am going to present things in a sort of backwards order - I'm going to show the installation dialog, and I'm going to run through the installation in the simplest possible way.. If you don't know what MBR, GPT or EFI mean, don't worry: it basically means the laptop disk I use will be very similar to most computers purchased with Windows 7 or older, but not like one with Windows 8 or Windows 10. In order to understand disk partitioning and make really good, informed decisions about this part of installing Linux, a lot of underlying information is required.. I will be using an old Lenovo T400 notebook running Windows 7, with MBR disk partitioning and legacy BIOS boot - I will not discuss GPT partitioning or EFI boot in this post.. google com/8 In the comments on my recent posts about installing Linux on a netbook for a novice user (and my own), someone mentioned that figuring out the disk partitioning was very difficult and particularly intimidating for new (or prospective) Linux users.. I suppose that is true, and I have to admit that I haven't contributed much to solving this issue in my blog, because every time I write about a Linux installer, I just sort of wave my hands at that part and say 'pay no attention to that man behind the curtain' because the partitioning on my systems is far too complicated to be used as an example.. NO partisi swap Perlu di SD! Program ini tidak partisi kartu SD Untuk memeriksa apakah ok, ketik 'bebas' di app Terminal!Twitter: @ azatoth77 Google+: https://plus.. If I try to present all of that first, though, a lot of readers are going to give up and move on to a more interesting article. e828bfe731
